Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 11-18 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-23 of U.S. Patent No. 6,673,620. Although the conflicting claims are not identical, they are not patentably distinct from each other because both are directed methods of applying staining reagents to slide and subsequent aspiration of the fluids.

Claim Rejections - 35 USC § 102

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 3-18 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Bogen (USP 5,073,504) or Bogen (USP 4,847,208).

These references teach slide chambers(4) that have been read on the claimed "slide housing". Column 5 lines 54-66 of ('504) and column 5 lines 14-26 of ('208) teaches a first valve which that controls the flow of reagents/buffers into the chamber

and a second suction valve that removes the fluids. These have been read on the claimed "liquid dispenser" and "liquid aspirator" respectively.

Response to Arguments

Applicant's 7/9/04 arguments were not convincing.

Applicant's state the obviousness type double patenting rejection is improper because the '620 patent has a later filing date and does not teach dropping the reagent into the cavity, but rather draws reagent into the cavity by vacuum.

The double patenting rejection is applied to the pending claim against the claims that have already issued to prevent the improper extension of Applicant's monopoly on the subject matter. The Office maintains this rejection is proper.

Claim 11 specifies the dispensing the liquid through an orifice which has been properly read on the '620 patent.

Applicant's remarks concerning Bogen '693 were convincing and the rejection has been vacated.

Applicant's states the remainder of the references have not been properly applied because they fail to teach movement of the fluid dispenser. These remarks are not commensurate in scope with the claims, which only require relative movement between the dispenser and the slide. The cited prior art clearly teaches movement of the slides to be positioned under the dispenser.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
